Obi-Wan Adobe Design Worksheet

Adobe Brick Construction

1. Your teacher will assign one of the following variables for your team to test: water content, straw content or sand content **←Circle your team's variable**
2. For the variable you are assigned, build the three bricks that are described below.
3. Carefully measure the ingredients for each brick the SAME way so each brick is exactly the same EXCEPT for the variable being tested.
4. Wet the mold with water before you place the brick mixture inside.
5. When finished, label each brick on the piece of cardboard with your names and A, B or C.

Variable being tested: Water Content

Brick A		Brick B		Brick C	
Material	# of cups	Material	# of cups	Material	# of cups
Soil	1	Soil	1	Soil	1
Sand	1 1/2	Sand	1 1/2	Sand	1 1/2
Water	1/4	Water	1/2	Water	1
Straw	1	Straw	1	Straw	1

Variable being tested: Straw Content

Brick A		Brick B		Brick C	
Material	# of cups	Material	# of cups	Material	# of cups
Soil	1	Soil	1	Soil	1
Sand	1 1/2	Sand	1 1/2	Sand	1 1/2
Water	1/2	Water	1/2	Water	1/2
Straw	0	Straw	1	Straw	2

Variable being tested: Sand Content

Brick A		Brick B		Brick C	
Material	# of Cups	Material	# of cups	Material	# of cups
Soil	0	Soil	1	Soil	2 1/2
Sand	2 1/2	Sand	1 1/2	Sand	0
Water	1/2	Water	1/2	Water	1/2
Straw	1	Straw	1	Straw	1

Adobe Brick Testing

Record the test results for at least three groups, including your own, in the following chart.

Group: _____ Variable: _____		**Group:** _____ Variable: _____	
Brick	**Drop Height**	**Brick**	**Drop Height**
A		**A**	
B		**B**	
C		**C**	

Group: _____ Variable: _____		**Group:** _____ Variable: _____	
Brick	**Drop Height**	**Brick**	**Drop Height**
A		**A**	
B		**B**	
C		**C**	

Name: _____ Date: _____

Graphing

Graph the results for each of the three different variables using the data from the tests. See if you can use the graph to figure out the amount of each material that makes the strongest brick.

Engineering Challenge

A village in Peru needs your help! They are building a new town center using adobe bricks and need to know how much of each material to include in their brick "recipe" to make them the strongest.

Using the information you learned from your class tests, develop a recipe for the village's adobe bricks. Include this recipe in the following chart and make a model brick to be tested next class period.

Huaraday, Peru ➔

Model Brick Recipe	
Material	**# of cups**
soil	
sand	
water	
straw	

Group Testing

1. Record the testing results for each group's model brick in the following chart.
2. Discuss as a class which brick was the strongest and why this may have been the case. Reference the graphs from the previous day, where appropriate.

Group	Drop Height	Sand (cups)	Soil (cups)	Water (cups)	Straw (cups)
1					
2					
3					
4					
5					
6					
7					

3. What other variables might you have introduced into your experiment that caused two bricks with exactly the same ingredients to have different strengths?
